Nature in your hands

Create a Life Cycle!

Every living thing has a life cycle. These life cycles go around and around in a circle, kind of like a bicycle wheel! For this activity you are going to pick your favorite plant or animal and use the space below to draw their life cycle. You can use pictures or words to create the life cycle. An example of a life cycle of a frog is below to help you create a life cycle. If you don't know the steps of the life cycle of the plant or animal you chose, ask a parent or guardian to help you research the different steps of that life cycle. To take the activity a step further, act out the life cycle that you create! Pretend to be the plant or animal going through its life cycle

Frog Life Cycle

Your Turn!
