

# Spooky Spider Web

---

With their eight legs, multiple eyes, and quick movements spiders can seem pretty spooky! But most spiders are actually harmless and they can benefit us by eating insects that could get in our homes or disturb our gardens. During this spooky season let's celebrate our spiders and build spider webs, just like the ones they make!

There are many different ways to create a spider web, just think about how you would like it to look! You can draw a spider web on a piece of paper and cut it out, you can create a spider web from string and popsicle sticks, or you can head outside for a nature walk and use collected sticks and yarn to make a hanging spider web.

Create a spider web however you would like and when you are done go for a walk outside to discover a real spider web!
